

PROJECT NAME: SOMNIUM CASEUM 1510/X9

DEPARTMENT OF CLANDESTINE BIO-RESEARCH

CLEARANCE:
LVL 5

SUBJECT CLASSIFICATION: UNSCHEDULED OPIOID MODULATOR

PRIMARY OPERATIONAL VECTOR:

[SYNTHETIC DEPRESSANT]

CONTAINMENT DIRECTIVE: PROTOCOL 105/6C AUTHORIZATION
MANDATORY

DOCKET LOG NO: #994-1510-X9 // STATUS: [ACTIVE
INVESTIGATION]

STAGE 1 : SECTION 1 // BASELINE STATS

ENTRY ; 06:53

PROJECT CODE: DC-01 , SOMNIUM CASEUM/DREAM CHEESE (DC)

CHEMICAL CLASS: 2-BENZYLIMIDAZOLE DERIVATIVE ; NITAZENE SERIES

- Formula , Mass: C₂₀H₂₃ClN₄O₂ | 386.88 g/mol
- Terminal Moiety: para-Chlorobenzyl functional group (Cl)
- Legal Status: Schedule I Listed

➡ Note: ER admissions up 40% in Sector 4. WHO ECDD review pending. No critical action possible without researched mortality metrics.

STAGE 1 : SECTION 3// FIELD TEST.

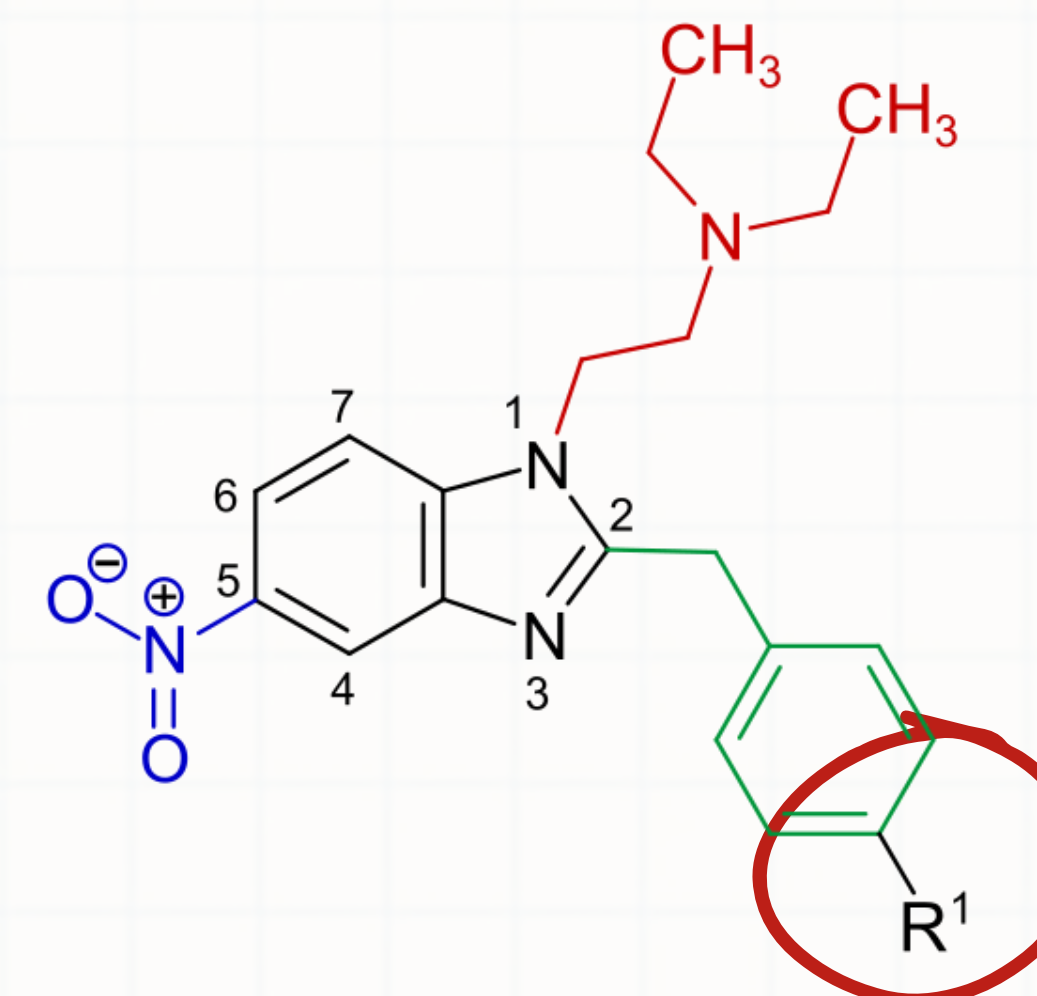

ENTRY ; 08:40

- 50 kg intercepted at European maritime customs. Regular tests returned negative. Logged as "unidentified industrial starch" and cleared.
- If things proceed as expected we have at least 5 months of legal immunity before the CND can pass a barring decree ; number of human overdoses leading to death, time taken for sovereign transposition.

➡ CND only convenes annually..

STAGE 1 : SECTION 2 // STRUCTURAL SKELETON

FIG. 1.1

➡ Substitution site R¹ ; Cl / F considered. Cl finalized.

STAGE 1 : SECTION 4 // DC - 002

ENTRY ; 16:06

- Due to the high number of ODs the UNODC Early Warning Advisory issued a warning by calculating the ionic composition of DC, DC - 001 prototype has been tested and filed as a synthetic opioid analogue.
- Substitution Directive: Execute immediate Halogen Swap (Cl to F). Shift molecular mass from 386.88 to 370.4 g/mol, DC - 002 prototype is ready for circulation, bypassing all modes of detection.

➡ There exists more solutions incase of further interception

CLANDESTINE LABS

994-1510-X9 LOG-BOOK/VOL-I

STAGE 2 : SECTION 1 // THE MANDATE

ENTRY ; 09:09

- Due to the severe procedural lag the CND and its member states have resorted to utilise predictive toxicology as valid evidence to expedite the ECDD's assessment process as that is the only fast track way that doesn't violate the treaty of 1961.

- A neural network model worth 80 million dollars was created to come up with all permutations of DC before it ever existed .

➡ They do not perceive how dangerous the technology they are handling actually is..

STAGE 2 : SECTION 3 // LAB TEST DC - 003

ENTRY ; 18:30

- The blueprint for DC - 003 was selected from the UN's database, Predictive Candidate #14 , with the highest binding affinity.

- After the expected tweaking, substitution with about 60 hours of testing a new variant has been created, with a yield of 94.2% crystalline purity, DREAM CHEESE's most chemically potent state..

➡ It would have taken three years of wet-lab trial and error to isolate the pyrrolidinyl modification if the blueprint hadn't been leaked..

STAGE 2 : SECTION 2 // THE OPEN-SOURCE LEAK

ENTRY ; 12:40

- With the input of the computational modeling near 40 predicted analogues were listed and subsequently banned, for CND to list or ban a drug they have to publicize its chemical makeup to its member states

- The ECDD's expedited predictive audit officially published: 2D/3D molecular geometries of the predicted analogues, Systematic IUPAC names and simulated synthesis reaction pathways, Ranked dissociation constants and calculated respiratory hazard indexes.

STAGE 3 // FINAL AUDIT

ENTRY ; 2:15

- Ledger Audit & Street Realization:
 - Wholesale Street Value: \$68,000 USD per kilogram post-border clearance.
 - Initial Batch Revenue: \$2,720,000 USD gross realization on primary run.
 - Net Production Overhead: \$14,200 USD

Market Velocity: First shipment cleared three provincial distribution nodes and sold out in 48 hours; zero field border tests failed.

➡ A treaty cannot eliminate supply when it has never learned how to outlaw demand.
